Office Action Summary

Application No.

09/622,199

Applicant(s)

SCHWARTZ ET AL.

Examiner

D. Margaret Seaman

Art Unit

1625

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 19 February 2002, paper #11.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 89-123 is/are pending in the application.
- 4a) Of the above claim(s) 123 is/are withdrawn from consideration.
- 5) ☐ Claim(s) is/are allowed.
- 6) ☒ Claim(s) 89-122 is/are rejected.
- 7) ☐ Claim(s) is/are objected to.
- 8) ☒ Claim(s) 89-123 are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. .
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

1. Paper #11, dated 19 February 2002, deleted claims 1-88. New claims 89-123 were inserted by paper #11. A new lack of unity of invention has been drawn due to the new claims. The originally elected group II was drawn to compounds and methods of use of compounds of formula (IIa). Due to this, the new group I will be the elected and examined group. The lack of unity of invention/restriction was made final in paper #9, dated 18 October 2001.

Election/Restrictions

2. As stated in paper #6, dated 6 September 2001, restriction is required under 35 U.S.C. 121 and 372. The original groups have been brought down to the following two groups due to applicant's cancellation of claims 1-88 and insertion of new claims 89-123 in paper #11.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 89-122, drawn to methods of treatment of compounds of formula (IIa), classified in various classes and subclasses.
- II. Claim 123, drawn to methods of treatment of compounds of formula (A), classified in various classes and subclasses.

Art Unit: 1625

37 CFR 1.475. Unity of invention before the International Searching Authority, the International Preliminary Examining Authority and during the national stage.

(a) An international and a national stage application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention"). Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art.

(b) An international or a national stage application containing claims to different categories of invention will be considered to have unity of invention if the claims are drawn only to one of the following combinations of categories:

(1) A product and a process specially adapted for the manufacture of said product; or

(2) A product and a process of use of said product; or

(3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or

(4) A process and an apparatus or means specifically designed for carrying out the said process; or

(5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process.

(c) If an application contains claims to more or less than one of the combinations of categories of invention set forth in paragraph (b) of this section, unity of invention might not be present.

(d) If multiple products, processes of manufacture or uses are claimed, the first invention of the category first mentioned in the claims of the application and the first recited invention of each of the other categories related thereto will be considered as the main invention in the claims, see PCT Article 17(3)(a) and § 1.476(c).

(e) The determination whether a group of inventions is so linked as to form a single general inventive concept shall be made without regard to whether the inventions are claimed in separate claims or as alternatives within a single claim.

3. As stated in paper #9, dated 18 October 2001:

The inventions listed as Groups I-XX do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The common core between all of these groups is "N". This is not a special technical feature that forms a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. However, it is not seen where N is a contribution over the prior art.

4. Applicant's election with traverse of group II in Paper No. 8, dated 9 October 2001, is acknowledged. The traversal is on the ground(s) that the instant claims have unity of invention due to the special technical feature of W. This is not found persuasive because of the following: A common core is something that is the same between all members of the markush grouping. W is defined as a residue which has activity when attached to an imidazole grouping. Well, W is not attached to an imidazole grouping due to the confines of claim 1. There is no teaching in the specification of how to determine if something has activity as a residue. If such is not taught, then it is part of the common knowledge. Common knowledge is not a contribution over the prior art. Therefore, W cannot be a special technical feature.

The requirement is still deemed proper and is therefore made *FINAL*.

4. The instant group I corresponds to the previously elected group II, group I will be examined. Claim 123 has been withdrawn from consideration as being drawn to a non-elected group II.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 89-122 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically, the claims are ambiguous due to many things in claim 89. The remaining claims are dependent from claim 89. (1) Double inclusion: Page 4 lines 7 and 8..."an optionally substituted heterocycle; a heterocycle comprising a sulphur hetero atom". Page 5 lines 3-20: Many of the disorders are stated twice. (2) Ambiguous language: "preferably" and "including". (3) The claim should be drawn to a method of treatment using a compound, composition, **or** its salt not **and** its salt. (4) The claim is drawn to "A method of treatment using a compound having the general formula (IIa)...as a ligand of the histamine H3-receptor, for applications selected from many diseases/conditions." A method claim needs to be drawn to "A method of treating XYZ conditions/diseases using a compound of the formula ...or its salt...or pharmaceutical composition..., wherein a patient in need thereof is treated with an effective amount.

7. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

8. Claims 89-122 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, it is not seen where the instant specification enables the ordinary artisan to use the instant invention to treat central nervous system disorders, providing psychotropic effects, providing nootropic effects, treating psychosomatic disorders and other conditions such as obesity. There are many factors to be considered when determining whether there is sufficient evidence to support a determination that a disclosure does not satisfy the enablement requirement and whether any necessary experimentation is "undue". These factors include 1) the breadth of the claims, 2) the nature of the invention, 3) the state of the prior art, 4) the level of one of ordinary skill, 5) the level of predictability in the art, 6) the amount of direction provided by the inventor, 7) the existence of working examples, and 8) the quantity of experimentation needed to make or use the invention based on the content of the disclosure. In re Wands, 858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988).

- 1) The breadth of the claims: The claims are drawn to a method of treatment of many diseases and conditions somehow linked to the ligand of the histamine H3 receptors by using a multitude of compounds having a nitrogen atom as a core.
- 2) The nature of the invention: The treatment of diseases/conditions linked to the ligand of histamine H3 receptors.
- 3) The state of the prior art: The prior art does not link all the diseases/conditions listed in the claims to a ligand of the histamine H3 receptors.
- 5) The level of predictability in the art: The predictability in the art is low due to the large differences in the activities of the compounds tested.
- 6) The amount of direction provided by the inventor: There is little direction provided by the inventor other than the specific examples in the specification.
- 7) The existence of working examples: There are many example compounds in the specification, however, few have been shown as having activity. Of those compounds tested, the activities vary widely with only minor changes in structure.
- 8) The quantity of experimentation needed to make or use the invention based on the content of the disclosure: The amount of experimentation needed is large due to the little guidance provided by the specification.

Taking all of this into consideration, the specification is not seen to be enabling.

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Margaret Seaman whose telephone number is 703-308-4528. The examiner can normally be reached on 630am-4pm, First Friday Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Allan Rotman can be reached on 703-308-4698. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-4556 for regular communications and 703-308-4556 for After Final communications.

Art Unit: 1625

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1235.
